Hello,

We emailed you within the last few days because we've had some trouble sending requests in test mode to a webhook endpoint associated with your Zora-Walat account. Good news—since we were able to successfully deliver a webhook event to this endpoint, we have resumed sending event notifications.

The URL of the failing webhook endpoint was: <https://zora-walat-api-staging.vercel.app/webhooks/stripe>

As a reminder, Stripe sends [webhook events](#) to your server to notify you of activity in your Stripe account, such as a completed payout or a newly created invoice. You can manage your webhook settings [here](#).

For more in-depth information on how to use webhooks, we recommend reviewing our [documentation](#).
